

THE EDITO

By Nicolas Malbec

Nicolas Malbec is a strategy consultant at Opus Aerospace. He is CEO of Fidelilium, a company specialising in cyber security. He created and directs the Cyberdefence master's programme at the Hexagone school, and holds the title of SSI Expert from ANSSI.

NewSpace: new frontiers and new challenges for cybersecurity

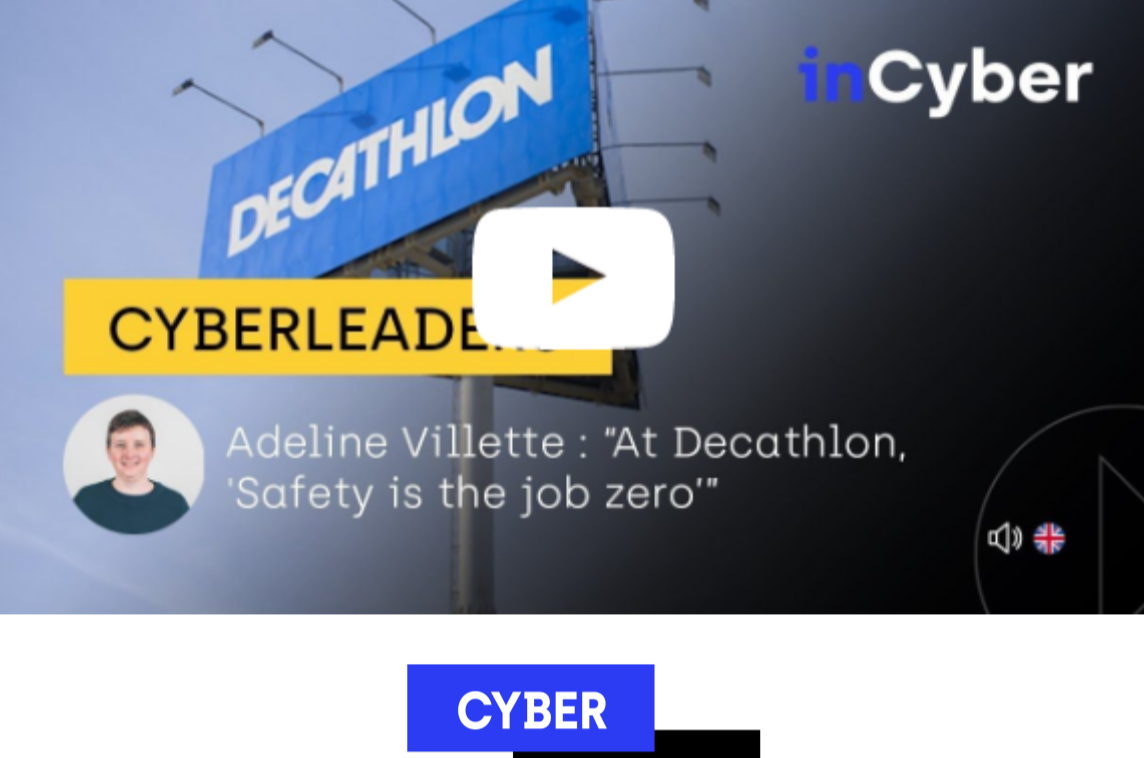

In 2022, European members of Parliament meeting at the Interparliamentary Conference on Space stated that Europe needed standalone and sustainable access to space. The space sector is clearly an eminently sovereign domain, and it is fair to say that space and cybersecurity are closely linked, including for NewSpace operators.

DIGITAL SOVEREIGNTY

(NANO Corp) Fanch Francis : "To build a European champion, you have to look for customers and investors in Europe from the outset."

By Fabrice Deblock

For the co-founder and director of NANO Corp, a French company specialising in deep observability, a European champion in this field can only be built by facing up to the realities on the ground beyond national borders.

CYBER RISKS

APSSIS conference helps hospitals improve their cybersecurity

By Stanislas Tarnowski

Hospitals are regularly in the spotlight as victims of devastating cyberattacks. Despite this, they are making steady progress with their cybersecurity. Events such as the 11th National Conference on the Security of Health Information Systems help drive this improvement. Here's a look back at a very informative conference.

SOCMINT, GEOINT, COMINT: three sub-disciplines of OSINT explained

By Fanny Tan

To identify who is behind a political poisoning incident, track the comings and goings of a billionaire's private jet, or even monitor an army's movements on the ground, open-source researchers frequently juggle multiple specialities. We take a close look at three well-known OSINT sub-disciplines.

SECURITY & STABILITY IN CYBERSPACE

Ukraine: the teacher turned hacker

By Pierre-Yves Baillet

Before Russia invaded Ukraine in February 2022, Trokhym Babych was a computer program designer. He taught coding and program design in schools and gave lectures on digital transformation. He decided to leave his job to help his country fight Russia and now describes himself as a hacker and hacktivist.

inCyber breakfast : Cybersecurity: the keys to crisis management

September, 12 2023

The next inCyber breakfast will take place in person and by video on September 12, 2023, from 9:00 to 10:30 a.m., on the theme of "Cybersecurity: the keys to crisis management".

"There are two types of organization: those that have already fallen victim to a cyber-attack, and those that soon will", announced Guillaume Poupard in 2022.

With their growing dependence on technology, organizations are faced with an ever-changing cyber threat, which can jeopardize their activities, data, and reputation.

In the face of this risk, cyber crisis management has become an essential skill for any entity wishing to protect its interests as well as those of its employees, customers, and users.
